For safety and pleasure on power boats and sailing yachts

For fishing and fun on recreational vehicles

THE ROTATING DINGHY DAVIT

A new innovation from Sweden

Designed for your convenience

The philosophy behind Dinghy Rings is simple – **enjoy your boat life with comfort and style**. That's why the rotating davit is discreet and detachable with an intuitive and unique design. Instead of lifting your dinghy aboard, deflating and inflating it or leaving it in the water, Dinghy Rings let you raise your dinghy in an easy and quick way to an upright position.

Reverse the dinghy astern of your boat, place the rear ends of the dinghy's pontoons in the rings, secure the dinghy and pull to lift it as the rings rotate. It hoists your inflatable in harbour or while cruising and suits almost any motorboat or sailing yacht.

- **Convenient**, easily handled by one person
- **Discreet** and detachable
- **Stable**, as the weight is distributed equally
- **Quick launch** in emergency situations
- **Affordable**, thanks to a simple and clever design

When standing, the dinghy **can't be flooded**, it takes almost no space, and even a **small engine can be kept mounted** under certain circumstances.

BOLD

Dinghy Rings BOLD is mounted under a wide external swim platform 110–400 centimeters. All of the mountings are hidden and both the middle arc and the rings are detachable. Dinghy Rings supports inflatable dinghies up to 60 kilos or 3,5 meters.

Specifications: 54/48/25 mm stainless steel AISI 316, Polypropen, straps in UV-resistant polyester, weight 9 kilos.

The rings and the middle arc are shaped to enhance the looks of the stern. All of the stainless steel parts are made of mirror polished pipes. At high speeds you only lift the dinghy to 45 degrees.

A small out-board can be kept mounted on the dinghy.

All the visible parts of Dinghy Rings are detachable, such as the rings.

The accessory **Pontoon LINK** is mounted on flat or light domed pontoon endings, for making inflatable dinghies without conical pontoon endings compatible with Dinghy Rings.

SLIM

Dinghy Rings SLIM is mounted under a narrow external swim platform up to 90 centimeters. All of the mountings are hidden underneath the platform and the rings are easily detachable. Can be combined with a ladder. Dinghy Rings supports inflatable dinghies up to 60 kilos or 3,5 meters.

Specifications: 30/25 mm stainless steel AISI 316, Polypropen, straps in UV-resistant polyester, weight 4 kilos.

FLEX

Dinghy Rings FLEX is hung over the stern, bow or side of a boat. It's adjustable in height and fits almost any boat. The accessory can be taken apart for storage and is designed for multi use, such as dinghy storage on mobile homes, trailers or in garages. Dinghy Rings supports inflatable dinghies up to 50 kilos or 3,5 meters.

Specifications: 30/25 mm stainless steel AISI 316, UV-resistant grey EVA foam wheels, weight 5 kilos.

When sailing in calm weather, you only lift the dinghy to 45 degrees, then you still have the back view and the wind does not grab the dinghy.
